## **DETAILED ACTION**

### ***Election/Restrictions***

1. Applicant's election with traverse of Group III in the reply filed on 26 May 2006 is acknowledged. The traversal is on the ground(s) that all the groups recite common elements. This is not found persuasive because Group I claims a roller. Group I does not positively claim a graft. Group II is a method for rolling a graft. The grafted can be rolled by a different apparatus than that claimed in Group I. Group III claims a graft. The graft is not positively claimed in Group I. The graft of Group III can be rolled in a different method than that claimed in Group II. Groups IV and V claim systems for delivering a graft. The systems of Groups IV and V do not require the graft of Group III.

The requirement is still deemed proper and is therefore made FINAL.

### ***Drawings***

2. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the larger diameter main section and two smaller diameter sections, and a flexible member embedded in the temporary covering must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure

Art Unit: 3734

is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

***Claim Rejections - 35 USC § 112***

3. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

4. Claim 26 is rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. Claim 26 includes the limitation of the graft includes a larger diameter main section and two smaller diameter section at an axial end of the larger diameter. Drawings of the graft (figs. 11-13) do not show the limitation nor was the examiner able to find in the written description the claimed configuration.

***Claim Rejections - 35 USC § 102***

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. Claims 22-25 and 27-30 are rejected under 35 U.S.C. 102(b) as being anticipated by Wallace et al. 6254628 (Wallace).

7. Wallace teaches a rolled graft, comprising a generally tubular graft flattened against itself and rolled onto itself into a cylindrical configuration; an aperture extending along the axis of the cylindrical rolled graft; the graft is rolled onto an axial member comprising a part of a delivery system by which the graft is deployed in a body lumen; an expansion element disposed axially within the rolled graft (col. 25, lines 57-59); a temporary covering surrounding and restraining the graft; the temporary covering comprises perforation along its length; the temporary covering is absorbable (col. 10, lines 28-29); a flexible member is embedded in the temporary covering (see figure).
